

PRINCIPAL AIR FORCE FID ACTIVITIES

Last Updated: 10 July 2015

Air Force [foreign internal defense](#) (FID) operations are primarily aimed at developing and improving host nation airpower capabilities. FID activities can take a variety of forms and should address the overall needs and capabilities of foreign airpower employment and sustainment.

A principal US instrument for conducting FID is the transfer of major items (weapon systems and related support capabilities) to selected host nations, primarily through the [security assistance program](#). The Air Force often facilitates such transfers through operational and strategic assessments, airpower studies, security assistance-funded aircraft refurbishment, airlift of security assistance-funded defense articles, training on specific weapon systems and support capabilities through security assistance-funded mobile training teams, and security assistance case management and oversight. Delivery of foreign military sales items can be performed in conjunction with multinational operations and contingencies and with other training programs conducted by the geographic combatant commander (GCC) and by various departments and agencies of the US government.

Air Force training and advisory assistance may be employed to facilitate the availability, reliability, safety, and interoperability of foreign aviation forces engaged in [internal defense and development](#) (IDAD) operations and in joint or multinational contingencies and actions. Training and advisory operations are a cost-effective means of helping host nations (HN) deal with internal problems before they assume regional or global dimensions requiring large-scale introduction of US combat forces. This assistance also builds enduring relationships with foreign officials who may provide or facilitate access to important resources and basing during crises or emerging contingencies. Critical access problems have often been overcome through bonds of trust forged between advisors and foreign military leaders during FID activities.

Air Force FID operations can establish a US presence, build rapport, achieve combined integration of forces, and build a foundation for future regional cooperation. If necessary, commanders can employ an even greater range of capabilities and resources in more direct forms of FID support when HN aviation units are inadequately sized or structured to make necessary and timely contributions to their own defense effort. The FID Activities figure summarizes the principal AF FID activities to accomplish FID objectives.

- ✦ **Facilitate the transfer of US defense articles and services under the Security Assistance Program** to eligible foreign government aviation units engaged in IDAD operations.
- ✦ **Assess foreign military aviation capabilities** and provide direction or recommendations towards improving host-nation airpower employment and sustainment methods. Aviation assessments are carried out primarily in support of GCC requirements and for other key agencies and departments of the US government. Assessments focus on foreign aviation capabilities and limitations, specifically aircrew capability and safety, aircraft airworthiness, critical resource availability, resource sustainability, and operational potential.

Train foreign military forces to operate, sustain, and improve indigenous airpower resources and capabilities. Training normally includes tactics, techniques, and procedures in such areas as [command and control](#) (C2); [combat search and rescue](#) (CSAR); communications systems support; air-space-ground interface; aerial insertion, extraction, and resupply; [intelligence, surveillance, and reconnaissance](#) (ISR); [close air support](#) (CAS), air interdiction; and airdrop operations. Appropriately funded training can be used to close specific gaps in foreign aviation operations and combat support skills and raise the level of competency where they can be advised on the proper employment of acquired capabilities. While skill-sets will be tailored to the individual partner nation, assistance common to FID missions includes training assistance in aviation/airfield topics; and support and sustainment areas include aircraft maintenance, logistics, life support, medical, force protection, survival, evasion resistance and escape, personnel recovery, munitions, ground

safety, and other functions supporting combat air operations and aviation enterprise development.

- ✦ **Advise foreign military forces and governmental agencies** on how to employ airpower in specific operational situations. Advisory assistance may also be provided to GCCs on such issues as foreign airpower capabilities, limitations, potential roles supporting joint and combined operations, and aviation enterprise development. Advising is conducted within the context of specific times, places, and situations. Advisory assistance addresses such areas as [airpower doctrine](#) (i.e., how to employ airpower as opposed to how to operate airplanes), mission planning, basing concepts, operational sustainment methods, tactical employment, communications capabilities, protection through cyberspace support (as approved), C2 development/employment, and the use of available space products for real-world operations and contingency actions. Along with training, Air Force advisory assistance helps foreign military forces and government agencies generate and sustain airpower supporting IDAD programs.
 - ✦ **Assist foreign aviation forces in executing specific missions or contingency operations.** Assistance can take on many forms, but generally includes hands-on assistance in [combat support capabilities](#) such as aircraft maintenance, fuels, health services support, and aviation medicine. Assistance may also include operational capabilities like C2, intelligence exploitation, aircrew mission planning, use of available space products, protection of operational communications systems through cyberspace procedures (as approved), and direct on-board advisory assistance in tactical operations. In the tactical realm, assistance can be applied to such functions as CSAR; fixed-wing and vertical-lift airlift, including personnel insertion and extraction; casualty evacuation; ISR; and air attack.
 - ✦ **Facilitate force integration for multinational operations.** Air Force personnel bring all other key tasks (assessing, training, advising, and assisting) together in a coordinated effort to draw foreign aviation forces into joint or multinational operations.
 - ✦ **Provide direct support to host countries** by using Air Force resources to provide intelligence, communications capability, logistics support, and airpower effects.
-
